Hi, could anyone help me with improving the resolution of a vector plot? I have tried velovect etc and the standard commands and am now using arrow direct. This looks just about OK on the screen, but screen grabs using WRITE_JPEG with quality = 100 or the Windows clipboard look worse.

The plot area is defined with a draw widget and is 1500 x 1000 pixels in size so I would expect to get better quality graphics. The text label was improved by switching to a vector font, but is still a bit square looking. The other plot types are very nice quality.

Sam
