Hi everyone.. I'm a student at HAO (High Altitude Observatory) and I am beginning to program in IDL. One problem I need to resolve is to change the "color" of the cursor in an IDL window (I run IDL through an X-Window system on a SUN Sparcstation). The color table I am using is ideal for viewing the images in the best possible detail (a white on black style) and it is very difficult to see the black cursor in the window which I am using to mark specific points on the image. I have used the `CURSOR_IMAGE` routine to design an appropriate cursor but there are no options for changing the color. Any help would be appreciated. Thanks in advance -Vince
