I am sorry. I forgot there some inferior platforms are confused about all the CR-LF and such...

The following Beta 2.02.0001-20010925-b has been tested on Mac, W2K and HP-UX. Sorry, I am out of platforms. Besides, it is backwards compatible with IDL 5.3 now. Other requests?

```
.*****  
,  
PRO Example_Event, event  
Widget_Control, event.top, Get_UValue=textID  
Widget_Control, textID, Get_Value=selectText, /Use_Text_Select  
Widget_Control, textID, Get_Value=theText  
; Added line  
loc = Widget_Info(textID, /Text_Select)  
loc = loc[0] - loc[1]*(!version.os_family eq 'Windows')  
; End added line  
jt = strjoin(thetext, string(1b))  
js = strjoin(selecttext, string(1b))  
rs = jt  
; Modified line  
strput, rs, string( byte(js) < 2b), strpos(jt, js, loc)  
; End modified line  
good_rows = where(strsplit(rs, string(1b), /extract) $  
    eq theText, count)  
if count ne 0 then theText = theText[good_rows]  
Widget_Control, textID, Set_Value=theText  
END; -----,*****
```

Cheers,
Pavel
