I have the following code:

```
IDL> .run
```

```
- data=['12.04','13.04','14.04']
```

```
- A= FLOAT(DATA[WHERE(DATA EQ FLOAT('13.04'))])
```

```
- print,size(FINDGEN(10.)+A)
```

```
- end
```

```
% Compiled module: $MAIN$.
```

```
      1      1      4      1
```

Why the heck do I not get an vector of size 10?!
