Thanks for the ideas. Just to give you a bit more of an idea I am trying to
create graphics that can be pasted or inserted into a MS Word document. I have
tried all the different arrow commands e.g. thick, and also different file save
types.

I know it is possible to produce a good quality vectot or arrow graphs with the
same data with other applications e.g. Mathematica, but unfortunately I want a
single software application to do this and the contour plots etc in IDL seem to
be the best by far.

I can't seem to increase the plot resolution other than by making the plot are
beigger than the screen display area but when I do this IDL seems to crash or
do random things.

Sam
