This kind of error often occurs when end-of-line characters are not in the file. This can occur, for example, by improper FTP transfer of an ASCII file from a Mac to a PC. Sometimes popping the file into a word processor on the target machine and saving it as a text file will get things sorted out.

This doesn't exhaust the list of possibilities, of course, but I'm almost certain the problem is not with Craig's code. :-)

Cheers,

David
