Hey Craig,
Now, that can't be right! They are 5.4! There was no 5.5 beta for the
Mac, and I still can't set up IDL on my PC... I am always behind.
I am afraid to post the code, I have an indication I may get banished
from the NG. Well, *you* already have it from the sneaky use of your
.sav hacking routines, so I risk the expulsion vote from you too, not
only JD :-(

Cheers,
Pavel

P.S. My only hope is that David vote for me to stay, because I wrote
those programs to totally avoid Common blocks ;-)
