Thanks to steinh@amon, gurman@uvsp, and velt@splinter for answering my post. The basic solution in this case was to specify XOFFSET, YOFFSET, XSIZE, and YSIZE in the call to DEVICE *and* specify the exact position (not the position number) on the page, XSIZE, and YSIZE in the call to TV. In both calls you must give the *same* physical units (e.g. /CENT). Now that I've got the picture on the viewable page I have more questions. Please, see my next post.

Thanks, Roger
