Subject: TV and the postscript device

Posted by rouse on Mon, 29 Aug 1994 21:21:58 GMT

Hi all,

I'm trying to put plots and pictures on the same page of hardcopy. When
I execute the script with device set to 'X' (set_plot,'x') then everything
looks good in the window. However, when I change to postscript usually
with

set_plot,'ps' & device,/landscape

the postscript output does not look the same as the window output. Apparently,
the pictures are displayed to fill the device's plotting area. How can I get
the postscript output to look like what I see in the window? That is, what
arguments to I give TV so that the picture is positioned properly in the
postscript image?

Thanks for any tips/info.
