Subject: IDLWAVE mode for emacs

I just went looking for the IDLWAVE mode for emacs (looking at
http://www.strw.leidenuniv.nl/~dominik/Tools/idlwave/), and found that
the host was not reachable. Is it just down temporarily, or has it been
moved? Does anyone know? And if it's just down, is there a mirror
somewhere that I can use to get the mode from?

Thanks.

Phillip
