I started by using the IDL Handi-guide (there is a PDF of the handi-guide in the "docs" directory in the IDL install directory) and an old version of David Fanning's IDL book. The handi-guide helped me get an idea of the functions and procedures that were available and the online help (enter "?" on the command line) gave me the details. David maintains a website with tips, tricks, and example code at <http://www.dfanning.com/index.html>
