Subject: *.sav file

Posted by L E Olsson on Mon, 29 Oct 2001 09:31:00 GMT

I am running IDL on a Windows plattform.
When I take my projects and via the BUILD
command make a *.sav file, the performance
of that file is not the same as running the project
from within IDL. Especially there is a problem
when calling external routines or modal widgets.

If I run the *.sav file the program always hang
at the following location

Start_Calculation, group_leader=Event.top

Start_Calculation is a *.pro file

I have tried to change the build order, but it
does not help. Any other suggestions to improve
the *.sav file??
