Thanks for the help,

(The original message back there is from me, writing as Sandy from work--it's the default in the computer I have there).

I thought I checked all my event handlers before I posted the message. I got tired of looking and just continued the program without No_Copy set, and then went back and turned it on in all the event handlers after everything else was working. It works fine, but I still don't know what I was missing earlier, or what I changed in the meantime to make it work now. Next time I will send you the program.
