Subject: Re: How to do a "match merge"?

I am not sure what exactly needs to be done. Something like

segment = {seg:0, piece:0, rotation:0.0, length:0.0}
segments = Replicate(segment, 2000)

segments.seg = indgen(2000)
segments[where(segments.seg gt 100)].length = the_Length
help, where(segments.seg gt 2 and segments.length lt the_Length)

?
Hope this helps.
Pavel
