IDL5.5, windowsNT,
please, how do i run contrast/brightness widget along with
the cursor_value?. I downloaded the widget for contrast/brightness,
called "xhsbc.pro". I copied this to the "macors" folder just
like i did the "cursor_value" one. Well, i ran the both of them
separately. When I ran the "cursor_value, image_bianry.A". i got
the image opened and i could read the pixel values very nicely.
Then, i ran the "xhsbc, image_binary.A". That just opened the
brightness/contrast window but no image. Seems like i can not
run these seperately. what is the usage commands for running these?.
Or, maybe i have to include the "xhsbc" inthe "cursor_value"
macro...?? how ??

Jim
