## Subject: IDL Memory Leaks

Posted by Myron Brown on Mon, 05 Nov 2001 17:53:25 GMT

Recently, I have noticed that my IDL programs leak memory, but I never use pointers directly. This is true when running with IDL on a Windows PC or on an SGI workstation. Widgets seem to be one source of problems. File I/O seems to be another, but I'm not yet sure. Due to the problems I'm having with memory leaks, my long runs eventually die when memory is exhausted.

Does anyone have any hints on ways to avoid memory leaks in IDL?

Please reply to my e-mail address, since I don't often use newsgroups.

Thanks.
