I can not help, but I can sympathize.

Just a couple of days ago I sent a postscript file, looking perfectly in GhostView and Illustrator, to a PS printer. The printer (in fact, a high speed copier) was on the third floor, I am on the second. And the damn printer is **really** fast. By the time I got there about 200 pages of were out, and in those 10 s it took me to realize something was fishy, at least another 50 came out. I frantically reset the printer, which was printing... all my 10 Mb PS file in ASCII.

Oh well. Now I have enough scratch paper for myself for a year and for David to finish the objects book.

BTW, the same file printed fine the next time. Computers, you know.

Cheers,
Pavel
