An open request to RSI and Visual Numerics:

I have found that IDL/PV-Wave programming is a very specific skill set and, as such, it is rather difficult to find consulting assignments and/or permanent positions requiring it.

Would you consider becoming a resource for those of us versed in your products who are looking for career opportunities?

Perhaps one way to go about it is to inform the present install base that there are professionals out there who already know the product and who know how to take advantage of its hardware independence. I'm sure that there are other ways to go about this, and I would be very interested to see a thread develop to see what your company and what the readers of this newsgroup have to say...

Sincerely,

Matthew T. Adams
