Hi all,

Is anyone having problems with IDL 5.5 under RH linux 7.1 and colors.
Even invoking XLOADCT shows a messed up color table and DIST(200,200) has
vertical lines through it.
I understood that all color depths were supported in 5.5. In the beta
version I still had to use the DEVICE, PSEUDO,DECOMPOSED trick, but that
doesn't even work for me now.

Cheers, Pete
