If you are stuck with xobjview, I think your only choice is to enlarge the window, take a snapshot of it with your favorite screen grabber, and then resize the image to increase the dpi. At around 1024x1024 you should be able to get a decent 10 cm x 10 cm image.

Can you use your pointer to resize the xobjview window? I haven't tried using the xsize,ysize keywords but I have resized the xobjview window with my pointer without problems. If you are getting an error on any resize I would look at what you are passing to xobjview as the culprit.
