Hi,

Does anyone know of an easy(!) way to produce a plot with non-standard scaling?

I've been asked to write a routine to plot data with a linear x-axis and a y-axis that is the log of a log. Any suggestions?

Is it possible to replace the standard coordinate conversion equations (data-to-device, device-to-data etc) with custom ones?

Replies to davidd@eos.co.uk

Thanks

Dave
