
Subject: IDL Bug: NCOMPLEMENT keyword to where

I've found an ugly bug with the NCOMPLEMENT keyword to where(), first introduced in IDL v5.4.

```
IDL> wh=where(1,NCOMPLEMENT=ncnt)
```

causes a segfault, in v5.4 and v5.5, under Linux at least. It only occurs if NCOMPLEMENT is used, but the corresponding COMPLEMENT is not. A temporary workaround is always to specify COMPLEMENT, even if you don't need it.
