Subject: IDL Bug: NCOMPLEMENT keyword to where Posted by John-David T. Smith on Fri, 16 Nov 2001 20:23:16 GMT View Forum Message <> Reply to Message

I've found an ugly bug with the NCOMPLEMENT keyword to where(), first introduced in IDL v5.4.

IDL> wh=where(1,NCOMPLEMENT=ncnt)

causes a segfault, in v5.4 and v5.5, under Linux at least. It only occurs if NCOMPLEMENT is used, but the corresponding COMPLEMENT is not. A temporary workaround is always to specify COMPLEMENT, even if you don't need it.
