Subject: 1-D band pass filtering
Posted by hahn on Wed, 05 Oct 1994 05:04:28 GMT

Hi,

I want to use IDL to process (filter) sound file (wav-files) and need some algorithms for band pass filtering, preferably without using FFT. I know that I can achieve a low pass filter by applying a moving average to the samples. How do I control the bandwidth and Q of the filter. How do I translate the algorithm to bandpass filtering.

Any hook is welcome!
Thanx
