Cheers!

I have this little problem with CW_BGROUP and the parameter /NONEXCLUSIVE:
as far as i know the buttons can have two values (on=1, and off=0) , so how
can i tell my program, that if when the status of the button is 'on' that he
does something (for testing: print, 'on' and otherwise print, 'off') ..see
the source below how i tried to solve it..seems logical to me, but it
doesn't work....

thanx for any help!
