
Subject: TVRDC--What is this hidden IDL/PV-WAVE function?

Looking at user library function profile.pro, and others,
someone here (bob jansen) noticed that various people use
tvrdc instead of the ungodly difficult mess of tvcrs, cursor,
tvrdr, etc., to try to read cursor positions.

I can find no documentation (including in the on-line help of
IDL and PV-Wave, and the index of their manuals) of this function.

Does anyone have any documentation on this function?

(opinions expressed are mine alone)
