Now that is totally cool! Where do we start the list of features we'd like to add?? I love the way you can reposition the plot using that little gizmo.

I did manage to crash it by putting in an illegal format. Was not sure what I was supposed to do at one point, so I tried a question mark! That was a bad idea!

What I should REALLY do is print out the program and figure out what the heck is going on inside. Maybe I can talk someone else into washing the dishes tomorrow while I do that....
