
Subject: Use SlickEdit to write and compile IDL programs

Hello,

I am looking to use the SlickEdit editor to write IDL programs.

Question 1)

It can parse and tag IDL functions and procedures that are not members of an object base on its knowledge of the PV-WAVE language. Is there a way for it to also recognize functions and procedures that are members of an object?

Question 2)

It can launch commands to compile programs (ex: cc myprogram) and capture the output of a command window. Can I compile my IDL programs from command line and get the output of the compilation somewhere else than the output log window of IDL?

Thank you,

Bruno Martin
