Hello,

I'm printing >20 2cm x 2cm pictures on a A4 page using tvscl and postscript.  
since there is no title option for tvscl, i don't know how to enumerate these  
pictures. the numbers could also appear within the pictures, i just don't know how to  
do it. fiddling with the /normal coordinates in postscript is definitely not the  
solution for me. anybody?
