All,

Andrew Cool has come up with a macro that uses an IDL procedure and two freeware utilities to allow Windows users to create color printouts of source code.

You can get these routines at

<http://www.kilvarock.com/freesoftware/utilities/printa2ps.htm>

The installation instructions are very simple and are also on this page.

Finally, if you have IDL routines that you would like to share but don't want to hassle with a web page, I will host them for free.

-Ronn
