Subject: IDLDE macro for printing chroma-colored source code
Posted by ronn on Thu, 06 Dec 2001 12:44:21 GMT

All,

Andrew Cool has come up with a macro that uses an IDL procedure and two
freeware utilities to allow Windows users to create color printouts of
source code.

You can get these routines at
 http://www.kilvarock.com/freesoftware/utilities/printa2ps.ht m

The installation instructions are very simple and are also on this page.

Finally, if you have IDL routines that you would like to share but don't
want to hassle with a web page, I will host them for free.
