Thanks Rick,

I've posted code (in reply to Dick) which shows the first stage at least of what I am trying to do, and yes it is related to a stereo head up display. Key thing about it is that you can set up a model frame, then a world frame in which you might add lights, then alias this world frame to the views, when you rotate the single model frame all the views see the same change from their viewpoint.

I will look at your stuff later - cant get through now.

Martin
