Subject: Re: looking for some idl + seawifs (seadas) help
Posted by daben on Sun, 23 Dec 2001 07:20:41 GMT

Hi Leon

I think I have found an issue: There seems to be something wrong with
bl2map (or maybe I just don't know what the hell I am doing). If I load a
L2 file and try to map it to the nav extents of the L2 file, I end up with
the whole world, but really zoomed out. It is hard to explain but maybe I
could post a picture of what I get and the exact steps and files and you
could give it a whirl.

I am also forwarding this to seadas (Mark) for some help hopfully.

thanks ben
