I want to plot some images using the TVSCL routine in IDL (ver 3.1.1). Basically, what I want to do is something like

The problem is, this way, XYOUTS doesn't clear the place before writing on it.
My XYOUTS print is just one of many in the actual window, and it's not supposed to be a window- or plot-title (even if it might look like this in my example).
So: how to do that??
Any help appreciated. Thanx
