Subject: naming elements in an array

Hi all,

I've just written a routine which returns a single column matrix array of 14 elements - what I'd like to do is to assign individual names to each value, so they can be called in calculations later on.

Does anyone know how I can do this? (Apologies if this is a 'trivial' problem - I'm currently trying to teach myself the world of IDL, with not too much success!)

Thanks for your time,

Manish
