---

Are ther any implications with IDL when running on AMD CPU's (Duron, Athlon etc) as compared to Intel ?

I thought it was a non issue, but the salesman at the computer store did mention that some customers using "high end graphics and video editing software" have experienced problems on AMD based PC's compared with Intel's. Not sure where IDL fits here but thought I should ask about anyone's bad experiences...

Thanks in advance

Rich
