You want your PostScript "window" to have the same aspect ratio as your graphics window, and you want to position text in either data or (better) normalized coordinates. You can find all kinds of useful tricks and programs to help you build perfect PostScript output files here:

<http://www.dfanning.com/documents/tips.html#PostScript>

You can find a number of programs to help you create PostScript output, including my PSConfig program, which puts all of these variables at your beck and call via a graphical user interface, here:

<http://www.dfanning.com/documents/programs.html#PostScript Programs>

Cheers,

David
