Hmmm, interesting.

We just got a 1.6Ghz AMD and 1.2Ghz Pentium.  
Both running Windows2000 Professional. The  
STREAM benchmarks (<http://www.cs.virginia.edu/stream/>)  
claim that the AMD is \*much\* faster, while  
IDL timetests indicate only a slight advantage  
for the AMD.

I wonder what's up with the Linux version?

Brian
