Hi, big guys,

I have a question here:

how to debug a IDL DLM routine?

I know a method if you can make a IDL program as a .exe file. but how to make a IDL program as a .exe file?

In Visual C++ environment, in project->Settings->Debug, we can set executable for debug session. If we can make a IDL program as a executable file, we can debug it in VC step by step.

If anyone can give me a hint about how to make a IDL program as a .exe file. Or is there any other method to debug a IDL DLM routine with Visual C++?

Any suggestion will be appreciated.
