
Subject: 5.5 bug or a local problem?

Posted by [James Tappin](#) on Thu, 14 Feb 2002 12:21:13 GMT

With IDL 5.5 on Linux (RH 6.2 and SuSE 7.3, XFree 3.3.6) when running in 24-bit colour, true-colour visual with decomposed=0, the TV procedure (and TVSCL) is swapping Red & Blue here -- has anyone else seen this?

I don't see the problem on Solaris and 8-bit is OK.

TIA

James
