---

Hello,

We are running Solaris and would like to CALL\_EXTERNAL directly to Fortran. Has anyone got this working and would share their Makefile?

(Note that we had no problem before Solaris, and that RSI does not have such an example in \$IDL\_DIR/misc/dynamic\_link yet.)

```
!VERSION = { sparc sunos 3.6.1a}  
uname -a = SunOS c3po 5.3 Generic_Patch sun4c sparc
```

Thanks!
