Thanks to Ted and Pavel: Your were absolutely right!

After creating the array with 100 elements (each with a null pointer):

```
; array for holding 100 elements of the type 'own_class'  
a = OBJARR( 100 )
```

I added the following statement in the loop, which runs over all the elements:

```
; label each array-element with it's number  
for i=0, 99 do begin  
  
; create a new object and put the point to it via the variable "a"  
a[ i ] = OBJNEW( 'own_class' )  
  
; call the method setproperty  
a[ i ] -> setproperty, integer_value = i  
  
endfor
```

Afterwards I had the expected output as mentioned in my former posting.

Cheers,
Tom
