I'm on Win XP and I agree - I've seen this behaviour a few times, but I just
scroll the window a bit. On my machine I seem to recall it happening when
I'm compiling a procedure with some sort of error in it ... sorry I can't be
more specific. I'll watch out for it and report back.

Meantime, am I the only person to be driven *crazy* by the fact that when I
place a breakpoint in my code, the program almost always stops with this at
the bottom of the editor (so I have to scroll down to see what's coming
before F10/F8'ing)? I suppose it's most irritating 'cause I'm using a
touchpad a lot:-)

Cheers,

Dave
