
Subject: How to shade area between two lines

Hi,

I have two lines on an xy plot. The horizontal axis is time.

One line is always above the other.

I would like to greyshade the area in between the lines.

How can this be done?

polyfill treats my vertices like a polygon,

and I do not want the last point connected to the first point.

Any suggestions appreciated.

a procedure which would work even when some of the data were missing
(i.e., valid time, invalid ordinate) would be even better.

Thanks,

Charlie
