
Subject: FIND the indexes of a value in a matrix

Hi all,

I have a 1000 X 4 matrix. I want to know the position of one value, say, 2342, in that matrix. I am able to do this in MATLAB with "find". How can I do this in IDL? Is there a command in IDL does this? (I don't see any in the help file.) The only thing that I can do is creating for-loops.
