## Subject: map_grid and western longitudes
Posted by Ken Mankoff on Sun, 31 Mar 2002 22:25:50 GMT

Hi,

Does anyone know of a way to make map_grid show longitudes increasing
to the west (i.e. Mars-like). I can do it manually with the gridlabel
keyword, but the problem is that my maps scale. Sometimes I look at
1x1 degree, and other times at the whole globe. map_grid takes care of
this for me, but if I override it and specify what longitudes I want,
either there are too many or too few.

Any help appreciated. I can always edit map_grid and all it takes is
probably one REVERSE() statement to get it to work... But if that were
true, RSI would probably have given me keyword. I am hoping that it is
there and I have just missed it...

Thanks,
  -k.
