I would agree with the others. An .eps file created in IDL should be ok (I wouldn't worry about the rgb/cmyk issue). I suggest setting your font type to 0 (!P.Font=0) as my experience has shown that many programs will not import the text correctly if it is set to anything else. Also, .eps files cannot contain more than one page (IDL will let you plot multiple pages, but most programs will choke on the file).

Other programs allow you to edit/manipulate .eps files too, not just Illustrator. Corel draw is one which is licensed by many government labs, maybe you have access to that.

Does your fish play the guitar? This might be a whole new field of study for my lab...
