I'll put it on the "to do"list -- so maybe it will be done in a couple of months...

Meanwhile, here's a one line solution to the original problem (of selecting only even numbered files), by specifying that the last character must be an even number

files = file_search('*[02468].ext')

The above works in V5.5 (when file_search() was introduced as a replacement for findfile()). For Unix systems and any version of IDL one can also write

files = findfile('*[02468].ext')

but, unlike the file_search() method,I don't believe that this method works for non-Unix systems.

Cheers, --Wayne
