
Subject: Command recall at prompt under linux.

Hi,

I'm running IDL 5.5 on my laptop under Mandrake 8.1, and I have a problem with the command recall. I use IDL via the IDL-shell and the up-arrow doesn't recall previous commands at the prompt...

It's also impossible to edit the current line without erasing (left arrow has no effect, I can only use backspace), or to ask the TAB key to complete files name.

Does anyone know how to fix this ?

(I am sorry if the answer to this was already given by the group but I didn't find it despite my efforts...)

Thank you,
Laurent.
