Bill,

I can't help you on how to get fonts for widgets, but when I was trying to make widget tables, I first thought that IDL was using proportional spacing. However, I found that on the VAXstations the font is not proportionally spaced, but rather all spaces are actually half-spaces (i.e. all characters have the same width except spaces, which are half width.) I fixed this by having the display software (tediously) search through each line and replace all spaces with two spaces. This made the table columns line up properly. I think....

Hope this works for you...
Eric
